

Report

DevOps Environment Setup

Sammsul Hoque Choudhary

22nd March, 2026

Introduction

Rahul, Senior DevOps Engineer at TechCorp, required assistance in setting up secure and monitored development environments for two new developers, Sarah and Mike. As a fresher DevOps engineer, I implemented system monitoring, user management, and automated backup procedures to meet operational and security standards.

Task 1: System Monitoring Setup

Objective: Ensure visibility into CPU, memory, processes, and disk usage for performance and capacity planning.

Steps Implemented:

1. Installed monitoring tools

```
sudo apt-get install htop
sudo apt-get install nmon
```

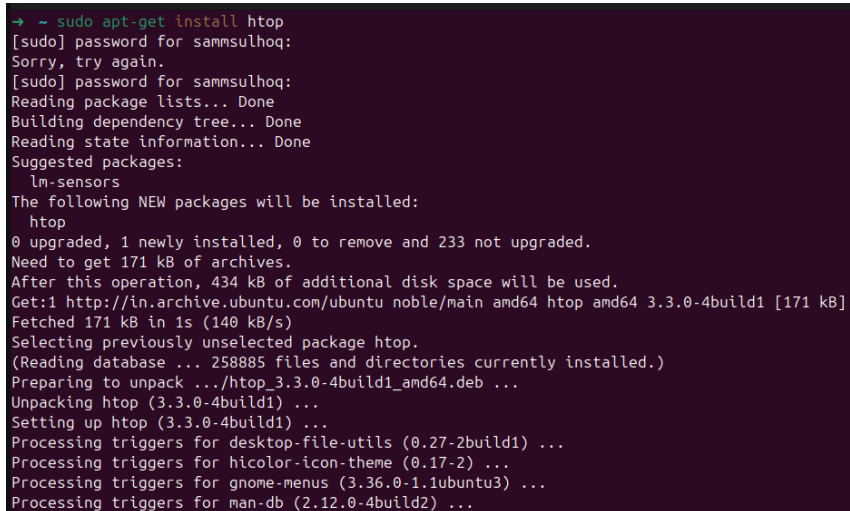

2. Monitored CPU and memory usage with **htop** and **nmon**.
3. Checked disk usage:

```
df -h
du -sh /home/*
```

4. Logged outputs into a file:

```
sudo sh -c 'htop -n 1 > /var/log/system_monitor.log'
sudo sh -c 'df -h >> /var/log/system_monitor.log'
```

Screenshots:

```
→ ~ sudo apt-get install htop
[sudo] password for sammsulhoq:
Sorry, try again.
[sudo] password for sammsulhoq:
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
Suggested packages:
  lm-sensors
The following NEW packages will be installed:
  htop
0 upgraded, 1 newly installed, 0 to remove and 233 not upgraded.
Need to get 171 kB of archives.
After this operation, 434 kB of additional disk space will be used.
Get:1 http://in.archive.ubuntu.com/ubuntu noble/main amd64 htop amd64 3.3.0-4build1 [171 kB]
Fetched 171 kB in 1s (140 kB/s)
Selecting previously unselected package htop.
(Reading database ... 258885 files and directories currently installed.)
Preparing to unpack .../htop_3.3.0-4build1_amd64.deb ...
Unpacking htop (3.3.0-4build1) ...
Setting up htop (3.3.0-4build1) ...

Unpacking nmon (16p+debian-1) ...
Setting up nmon (16p+debian-1) ...
Processing triggers for man-db (2.12.0-4build2) ...

```

```

→ ~ df -h

```

Filesystem	Size	Used	Avail	Use%	Mounted on
tmpfs	3.9G	2.8M	3.9G	1%	/run
/dev/nvme0n1p2	937G	53G	837G	6%	/
tmpfs	20G	95M	20G	1%	/dev/shm
tmpfs	5.0M	8.0K	5.0M	1%	/run/lock
efivarfs	246K	171K	71K	71%	/sys/firmware/efi/efivars
/dev/nvme0n1p1	1.1G	6.3M	1.1G	1%	/boot/efi
tmpfs	3.9G	128K	3.9G	1%	/run/user/1000

```

→ ~ du -sh /home/*
17G    /home/sammsulhoq

```

```

→ ~ sudo sh -c 'df -h >> /var/log/system_monitor.log'
→ ~ sudo sh -c 'htop -b -n 1 > /var/log/system_monitor.log'
htop: invalid option -- 'b'
→ ~ sudo sh -c 'htop -n 1 > /var/log/system_monitor.log'

```

Task 2: User Management and Access Control

Objective: Create secure accounts and isolated workspaces for Sarah and Mike.

Steps Implemented:

1. Created user accounts:

```
sudo adduser sarah  
sudo adduser mike
```

2. Created dedicated workspaces:

```
mkdir /home/sarah/workspace  
mkdir /home/mike/workspace
```

3. Set ownership and permissions:

```
chown sarah:sarah /home/sarah/workspace  
chmod 700 /home/sarah/workspace  
chown mike:mike /home/mike/workspace  
chmod 700 /home/mike/workspace
```

4. Enforced password policy (expire every 30 days):

```
sudo chage -M 30 sarah  
sudo chage -M 30 mike
```

Screenshots:

```
→ ~ sudo adduser sarah
info: Adding user `sarah' ...
info: Selecting UID/GID from range 1000 to 59999 ...
info: Adding new group `sarah' (1001) ...
info: Adding new user `sarah' (1001) with group `sarah (1001)' ...
info: Creating home directory `/home/sarah' ...
info: Copying files from `/etc/skel' ...
New password:
BAD PASSWORD: The password is shorter than 8 characters

Sorry, passwords do not match.
New password:
BAD PASSWORD: The password contains the user name in some form
Retype new password:
passwd: password updated successfully
Changing the user information for sarah
Enter the new value, or press ENTER for the default
    Full Name []: Sarah Muller
    Room Number []: 101
    Work Phone []: 1234567890
    Home Phone []:
    Other []:
Is the information correct? [Y/n] Y
info: Adding new user `sarah' to supplemental / extra groups `users' ...
info: Adding user `sarah' to group `users' ...
```

```
→ ~ sudo adduser mike
info: Adding user `mike' ...
info: Selecting UID/GID from range 1000 to 59999 ...
info: Adding new group `mike' (1002) ...
info: Adding new user `mike' (1002) with group `mike (1002)' ...
info: Creating home directory `/home/mike' ...
info: Copying files from `/etc/skel' ...
New password:
BAD PASSWORD: The password contains the user name in some form
Retype new password:
Sorry, passwords do not match.
New password:
BAD PASSWORD: The password contains the user name in some form
Retype new password:
passwd: password updated successfully
Changing the user information for mike
Enter the new value, or press ENTER for the default
    Full Name []: Mike Cooper
    Room Number []: 102
    Work Phone []: 0987654321
    Home Phone []:
    Other []:
Is the information correct? [Y/n] Y
info: Adding new user `mike' to supplemental / extra groups `users' ...
info: Adding user `mike' to group `users' ...
```

Name ^

 mike ✖

 sammsulhoq

 sarah ✖

```
→ ~ sudo chown sarah:sarah /home/sarah/workspace
→ ~ sudo chmod 700 /home/sarah/workspace
→ ~ sudo chown mike:mike /home/mike/workspace
→ ~ sudo chmod 700 /home/mike/workspace
chmod: invalid mode: 'chmod'
Try 'chmod --help' for more information.
→ ~ sudo chmod 700 /home/mike/workspace
```

```
→ ~ sudo chage -M 30 sarah
→ ~ sudo chage -M 30 mike
```

Task 3: Backup Configuration for Web Servers

Objective: Automate backups for Apache (Sarah) and Nginx (Mike).

Steps Implemented:

1. Created backup directory:

```
mkdir /backups
```

2. Backup scripts:

Apache (Sarah)

```
tar -czf /backups/apache_backup_$(date +%F).tar.gz /etc/httpd/  
/var/www/html/
```

Nginx (Mike)

```
tar -czf /backups/nginx_backup_$(date +%F).tar.gz /etc/nginx/  
/usr/share/nginx/html/
```

3. Scheduled cron jobs (every Tuesday at 12:00 AM):

```
crontab -e
```

Added lines:

```
0 0 * * 2 tar -czf /backups/apache_backup_$(date +%F).tar.gz /etc/apache2/  
/var/www/html/  
0 0 * * 2 tar -czf /backups/nginx_backup_$(date +%F).tar.gz /etc/nginx/  
/usr/share/nginx/html/
```

4. Verified backups:

```
tar -tzf /backups/apache_backup_YYYY-MM-DD.tar.gz  
tar -tzf /backups/nginx_backup_YYYY-MM-DD.tar.gz
```

```
→ ~ sudo mkdir /backups  
[sudo] password for sammsulhoq:  
□
```

```
tar: Exiting with failure status due to previous errors
→ ~ sudo tar -czf /backups/apache_backup_$(date +%F).tar.gz /etc/apache2/ /var/www/html/
tar: Removing leading '/' from member names
tar: Removing leading '/' from hard link targets
→ ~
```

```
→ ~ sudo tar -czf /backups/nginx_backup_$(date +%F).tar.gz /etc/nginx/ /usr/share/nginx/html/
tar: Removing leading '/' from member names
tar: Removing leading '/' from hard link targets
→ ~
```

```
→ ~ crontab -e
no crontab for sammsulhoq - using an empty one
crontab: installing new crontab
→ ~
```

Conclusion

Reading Rainbow Tip: It's important to give your opinion! Would you recommend this book to someone else?
